

Overview

You can now configure CRE to accept weight-embedded barcodes with prices that exceed \$99.99. This feature is available in versions 13.1008 and later.

CRE Configuration

To enable this barcode customization, follow these steps in CRE:

- Go to the **Invoice Settings** tab of the **Setup Screen**.

The screenshot shows the 'Setup Screen' window with the 'Invoice Settings' tab selected. The 'Scale Barcode Parse Format' section is highlighted with a red box. It contains the following options:

- Original Method
- Custom Format
- Regular Expression

Custom format example: 2AAAA\PPPPPC
Where: 2 = Variable Price Indicator, A = PLU Placeholder, V = Verification Digit, P = Price Placeholder, Q = Quantity (or Weight) Placeholder, C = Check Digit
Regular expression that matches the above custom format:
`2{1}{?<PLU>\d{4}}\d{1}{?<PRICE>\d{5}}\d{1}`

Include separator in the item price, this will allow price above 100

At the bottom of the window, the 'Update' button is highlighted with a red box.

- Under **Scale Barcode Parse Format**:
 - Select **Original Method**.
 - Check the box to **Include separator in the item price, this will allow price above 100**.
- Select **Update** to save your changes.

Please note: This customization is available only with **Original Method** selected. If you select **Custom Format** or **Regular Expression**, the option will be grayed out.
